

## 5- Step Test Procedure for Line Verification

1. Disconnect the phone line from inside the car, **(Car Panel) It is required, by code, to test the phone line from within the car.** *(Do not disconnect phone line inside machine room.) A17.1 2.271.1.6a*
2. To force a verification test, remove power to the line verifier by unplugging the power transformer from the outlet for at least 5 seconds and then plug it back in.
3. Once the power is restored to the line verifier, a test will be performed and the fault will be triggered.
4. Use the key to silence the audible alarm, if desired.
5. Re-connect the phone line inside the car panel. The line verifier will test the phone line every 5 minutes until the fault clears.

The line verifier will test the phone line every 24 hours and will check for **both dial tone and loop current voltage**. The line verifier will also test the phone line every time power is restored.

**This line verifier complies with A17.1 2010 and above codes**
